

Create a project component remote action

This action template provides the functionality to create a new project **component** within a Jira Cloud or Jira on-prem instance.

Configuration

Name

The **name** parameter defines the name of the new component to be created.

Project key

The **Project key** parameter defines the project where the component should be created.

Description (optional)

The **Description** parameter allows setting some descriptive sentences to the component to be created.

Action-specific response options

The response options offer values which are taken from the rest response of the executed template.

Value	Description
Project ID	Returns the project ID where the new version is created.
Component ID	Returns the new component ID created by the action.

Other **default options** like **Response body**, **Response status** or **Set field value manually** are available in any mode in the post function.

Use cases and examples

Use case	JWT feature	Workflow function	Parser functions	Label
Automatically create a version when starting the release		Execute remote action
