Create a user remote action

This action template provides the functionality to create a new Jira user within a Jira on-prem instance.

⚙️ Configuration

Username

The **Username** parameter defines the name of the new Jira user account.

Password

The **Password** parameter defines the password of the new Jira user account.

Email address

The **Email address** parameter defines the email of the new Jira user account.

Display name

The **Display name** parameter defines the full name of the new Jira user account.

📄 Action-specific response options

The response options define values which are taken from the rest response of the executed template.

Value	Description
Username	Returns the **new username** created by the action.

Other **default options** like **Response body**, **Response status** or **Set field value manually** are available in any mode in the post function.

📁 Use cases and examples
