

Create issue under epic

On this page

[Configuration](#) | [Related use cases](#)

Use case

Create an issue after transitioning an epic and **update its Epic Link** field to link it to the transitioned epic.

Configuration

1

Add a [Create issue](#) post function to the desired **workflow transition**.

The **Create transition** might be here the best choice. When added to the **Create transition**, the post function will be automatically executed each time that an issue is created.

2

Issues to be created

1

Mode

Choose **Single issue**

2

Issue type

Choose **Selected issue type** Task

3

Summary

Enter **any expression that suits your needs**.

Issue under epic

3

Additional options

1

Epic Link

Choose the **Epic Link** field.

2

Value

Select **Select field value manually (parser expression)**.

3

Expression

Write the following expression with the expression editor in **Basic text** mode.

```
%{issue.key}
```

Variation

If the **transitioned issue is an issue under the epic** instead of the epic itself, you could use this expression in **Advanced text** mode to inherit the *Epic Link* field value.

```
toString(epic())
```

4

Conditional execution

Use the following expression.

```
%{issue.issueType}="Epic"
```

This expression evaluates if the **issue type of the issue that executes the transition is *Epic***. If it is needed that other issues with different issue types execute the post function, the expression for the conditional execution should be adjusted.
