JWT release notes 3.3.0

Release date	22 Feb 2023
Release type	FEATURES IMPROVEMENTS MAINTENANCE
Highlights	Feature and improvement release including JCMA support

New features

- **JWT** now supports the **Jira Cloud Migration Assistant (JCMA)** unblocking an **automated app migration** to the Cloud
- **Expert view** is now available for the **Update fields based on rules** post function
- Issue view is now refreshed automatically when the **Transition issue** post function is used
- New **parser functions** are now available to **read remote links** from issues
- Email notifications can now be configured within the **Create issue action**

Improvements

- Configuration tables in post function views are more responsible now
- Calendars expressions now come with additional examples

Bug fixes

- Workflow and transition selection did not work properly in the Transition issue post function under certain circumstances
- Send email action did not work properly, when a user was selected as target person
- Components were not set, when moving an issue with the Move issue post function
- Linked issues option in the Issue selector did not work properly in automation rules
- Comparison operators did not work properly, when two text-based custom fields were compared
- Red asterisks were missing on Create issue screen using the Fields required or changed validator under certain circumstances
- issueSelection() JQL-function did not work properly with system field codes in the issue navigator
- Set or create JWT user property post function did not work properly
