

# Supported platforms

In general, we stick to the [EOL policy](#) from Atlassian in regards to supporting Jira Server and Data Center versions. For detailed information, please check out our [version history](#) on the Atlassian Marketplace.

As an app built on top of Jira, we try to cover all platforms, that are supported by the host application. Please refer to the [supported platforms documentation](#) for your Jira version.

That's being said, we do not support Internet Explorer 11 and below beginning with JWT 3.0 as an exception to our general rule above.

---

If you still have questions, feel free to refer to our [support](#) team.
