

Set Checklist

On this page

[Configuration](#) | [Related use cases](#)

Use case

Set a Checklist custom field of [Checklist for Jira](#) in the transitioned issue using Jira's [Edit issue REST API](#).

Configuration

1

Add the [Execute remote action post function](#) to the transition of your choice.

2

In **Expert mode**, create a **new action** with the following parameters:

1

Name

Enter **Set Checklist** as the name of the new action.

2

Method

Select the **PUT** method.

3

Default connection

Select the connection with the **current instance**.

4

REST path.

Enter the following **REST path**.

```
/rest/api/2/issue/{issueIdOrKey}
```

5

REST path parameter

For the REST path parameter *issueIdOrKey*, select the field **Issue key**.

3

Action body

Enter an **action body** like the following one. For more indications on how to **configure the action body** to update a Checklist custom field, visit the [Checklist documentation](#).

```
{
    "update": {
        "customfield_aaaaa": [
            {
                "set": [
                    {
                        "name": "Item",
                        "checked": false,
                        "mandatory": true,
                        "id": 3,
                        "globalItemId": 1,
                        "rank": 0,
                        "assigneeIds": [
                            ...
                        ],
                        "isHeader": false,
                        "status": null
                    }
                ]
            }
        ]
    }
}
```

It is necessary to specify the Checklist field ID in the action body, defined as `aaaaa` in our example.
